

The Largest-Scale Solar Farm in Australia was Completed with JinkoSolar Panels

Dear Sir / Madam,

Jinko Australia is proud to be the solar module of choice for the Royalla Solar Farm, constructed near Canberra ACT. Using nearly 83,000 Jinko modules, the 20Mw project is currently Australia's largest operational solar farm to date. Constructed under the ACT Government's Large Scale Solar programme. The solar farm will produce approximately 37,000 megawatt hours of renewable energy each year for the next 20 years and will provide enough electricity to power approximately 4,500 Canberra homes.
